DESCRIPTION

The AS8S2M32 is a high speed, 3.3V, 64Mb SRAM. The device is available with access times of 12, 15, 20 and 25ns creating a zero wait state/latency, real-time memory solution. The high speed, 3.3V supply voltage and control lines, make the device ideal for all your real-time computer memory requirements.

The device can be configured as a 2M x 32 and used to create a single chip external data /program memory array solution or via use of the individual chip enable lines, be reconfigured as a 4M x 16 or 8M x 8.

The device provides a 40+% space savings when compared to four 2M x 8, 54 LD TSOP2. In addition the AS8S2M32 has only a 20pF load on the Addr. lines vs. ~30pF for four plastic SOJs.
